1421 Safety Guidance

Using the Propane Bitumen Boiler

- 2.
- Wear your protective equipment. Wear clothing and gloves to cover as much bare skin as possible.
- sential persons to work in the area where the hot tar is used.
- Stand the Tar Boiler on a firm level surface, which should be non-combustible and capable of carrying the load. Do not site the boiler inside a building or in an enclosed or confined
- When based on the roof surface, set the boiler in a dedicated (metal) spillage tray with a greater capacity than the contents of the boiler, to contain any spillage. Set the tray on a e resistant material.
- Set up the gas cylinder at least 3 metres away from the boiler during use. Any additional gas cylinders should be stored at a distance from the boiler of at least 6 metres.
- Ensure the burner assembly is located correctly and that the boiler is half filled with solid tar. Turn on the gas at the cylinder valve and carefully light the burner.
- Heat the cold tar slowly until any water is driven off and the tar becomes liquid.
- 9. Do not apply direct heat to any taps, valves or pipes on the boiler to try to get it operational quicker. You will cause damage to the parts heated.
- 10 Do not allow water to come into contact with hot tar. Hot water and tar will be spat out.
- Do not ladle hot tar out of the boiler, this can also cause spitting. Use the draw off tap. 11. Carry melted tar only incorrect containers, for example lidded buckets. 12.
- Keep the lid on the boiler at all times; replace it as soon as possible after removing it 13.
- Check the level and the temperature of the tar in the boiler regularly. Make sure it does not overheat or run low. Add solid tar carefully to avoid splashes.
- 15. Decide on the safest route for the hot tar to be carried form the boiler to the workplace 16.
- Make it safer by removing any obstacles and informing people of the designated path.
- Stop work and make safe if someone approaches you.
- Turn the gas off at the cylinder if leaving the boiler unattended, even if it is only for a short
- 19. Do not move or transport the boiler while it is lit or while it is hot, allow it to cool down until
- Keep the outside of the boiler 'clean' by daily removing drips and splashes of tar.
- If your equipment does not work properly do not attempt to repair it. Contact the hire

Propane Bitumen Boiler

The rules and procedures in force where people are at work may require the person responsible for this equipment to carry out a specific risk assessment.

Three types of risk that need to be controlled when using Bitumen Boilers are:

- Fire and explosion risk from storage and use of liquefied petroleum gas (LPG).
- Risk of burning from contact with hot bitumen.
- Risk of respiratory irritation from excessive inhalation of bitumen fumes

It is important to read this entire leaflet **BEFORE** using the Propane Tar Boiler

- Plan your work and think ahead to make sure you will always be working safely.
- Propane gas is highly flammable. Take care not to cause a fire or explosion.
- The bitumen boiler is designed for melting bitumen products other than cut-back bitumens for weatherproofing applications in the open air including roofing work, flooring applications, road surfacing, and cable jointing.

 Operation of this bitumen boiler can cause injury or damage if not used in a careful and
- controlled way. It is very heavy when full, take care when moving it.
- If you have not used this type of equipment before, familiarise yourself with how it works and the hazards it presents before you start work.
- You must have at least the following items of personal protective equipment: Goggles or Full Face Visor to BS EN166, Safety Boots to EN ISO 20345:2011, suitable protective work gloves, and suitable protective clothing to avoid skin contact from
- This bitumen boiler must not be used by minors or by anyone under the influence of drugs or alcohol.
- This bitumen boiler is designed for operation by an able bodied adult. Anyone with either temporary or permanent disability must seek expert advice before using it.
