

RGA3

FALL ARREST BLOCK - 15M RGA3

The RGA3 is a robust fall arrest block with a long working length and heavier construction. The RGA3 has been used successfully by the offshore industry for many years.

The carrying handle of the RGA3 is part of the cast alloy housing and can be connected to the anchorage point using soft slings or a connector. The RGA3 is suitable for use in most industries to provide protection in work areas with overhead anchorage points.

For self-connecting to the block, it is recommended that the operative uses an extension strop (RGL4) in order to ease the task. The RGA3 is supplied with galvanised wire cable.

EN 360:2002

Line material:	5mm galvanised wire cable
Case material:	Alloy
Connector(s):	Double action high tensile steel swivel karabiner
Weight:	9.2kg
Max user weight:	140kg
Max force:	<6kN

FEATURES

Built-in fall indicator
